

OLE IRON SLIDES™

With the advent of the adjustable iron slide baluster, the do it yourself person can now design and install their own balustrade. Using only a drill, screwdriver and an allen wrench, the adjustable iron baluster can replace your old wood spindles without the expense of a professional. Leave your wood rail and newels in place, remove the wood spindles and replace them with a wrought iron balustrade quickly and without a big mess. Presto, you have a new design flavor for your living area.

NEW SWIVEL TOP

This new top attachment adjusts to any angle and installs with two wood screws in seconds. No more drilling round holes and trying to fit square material in them. The new swivel top eliminates grinding to fit any angle. The quick disconnect allows tile use of the new slide on castings.

NEW BASE

The new structural base is amazingly quick and easy to install. A tread layout and a lead hole is all you need, then position the base and screw to tread. Installation time is measured in seconds not minutes. This base is surprisingly strong. Remember all you need to install this system is a drill, screwdriver and alien wrench. The new base and top swivel can be used with any standard baluster for a fast strong installation.

* The use of a thread locking liquid is strongly recommended on all set screws.

DESIGN CAPABILITIES

The adjustable baluster comes in four basic styles. The Basket, Scroll, Straight and Twist patterns. With the Straight one you use slip on castings to create your own special design. To use the slip on castings remove the alien screw from the top swivel, tilt baluster back and slide casting on. Replace baluster to swivel and then fasten casting at desired height by tightening alien set screw.

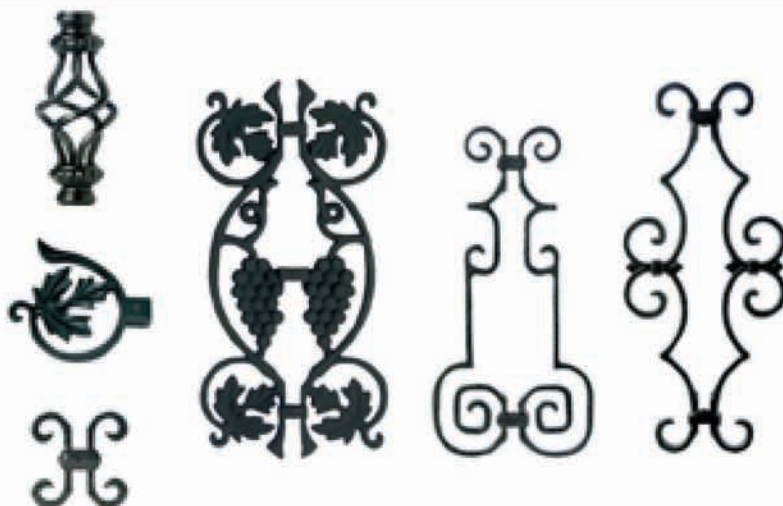

Ole Iron Slides™ baluster assembly system is subject of one or more patent applications.
